## ARE YOU READY FOR THE FUTURE?

Welcome! You've reached the online catalog of BAMAFUEL, LLC. We build high quality fuel injection kits and complete bolt-on fuel injection systems. Our products are based on MegaSquirt, the fuel injection controller that is making waves in the automotive aftermarket. If you haven't heard of it before, where have you been hiding? This controller allows us to provide you fuel injection kits with a large number of powerful features at an unbeatable price.

If you are already familiar with MegaSquirt, you know that this controller has traditionally required that the installer have an above-average level of determination and be comfortable with wiring diagrams. Not anymore! Our kits are designed for easy installation and require no assembly or wiring. Just bolt it in and start tuning!

Currently, we have bolt-in kits available for all vehicles powered by the Ford 2.3 Turbo engine-- including the **Mustang SVO**, **Thunderbird TurboCoupe**, and **Mercury XR4Ti**. There are also kits available for '87-'93 2.3L Mustangs, to assist those of you performing turbo motor swaps. We also have kits available for the '86-'93 **5.0L Mustang**. Other products are in the works, including kits for '94-'95 Mustangs and '89-'93 Thunderbird Super Coupes. For more information and specifications, please feel free to browse through our catalog using the menu to the left.

If you have any questions, please don't hesitate to send an email to [sales@bamafuel.com](mailto:sales@bamafuel.com), and we'll get right back to you as quickly as possible. Thanks for stopping by!
